<b>Subject</b>	<b>Old Canterbury Road / Weston Street traffic modelling assessment</b>	<b>Project Name</b>	The GreenWay Missing Links Master Plan
<b>Attention</b>	McGregor Coxall	<b>Project No.</b>	IA174800
<b>From</b>	Richard Banzon		
<b>Date</b>	19 March 2018		
<b>Copies to</b>	McGregor Coxall and Inner West Council		

---

## 1. Introduction

This memorandum outlines the traffic modelling assessment of the proposed of Old Canterbury Road / Weston Street / Edward Street intersection as part of the GreenWay.

The outcomes of this assessment will inform the route options assessment by McGregor Coxall, which is being prepared as part of The GreenWay Missing Links Master Plan development process.

This memorandum is structured as follows:

- Section 2 outlines the traffic modelling approach undertaken for the assessment
- Section 3 details the intersection configurations modelled and any assumptions made
- Section 4 outlines the results of the assessment
- Section 5 presents a summary of assessment findings

## 2. Traffic modelling approach

### 2.1 Intersection performance criteria

The assessment has been undertaken using SIDRA INTERSECTION (Sidra) modelling software (version 7). Sidra is a micro-analytical tool for evaluation of intersection performance in terms of capacity, Degree of Saturation, Level of Service, average vehicle delay and queue lengths, and is an appropriate tool for modelling individual intersections. Roads and Maritime Services (Roads and Maritime) *Traffic Modelling Guidelines* (version 1.0, February 2013) state that the following core performance elements should be assessed when modelling using Sidra:

- Degree of Saturation (DoS)
- Level of Service (LoS)
- 95 per cent back of queue distance

#### 2.1.1 Degree of Saturation

DoS is defined as the ratio of demand (arrival) flow to capacity (also known as volume to capacity ratio). A DoS above 1.0 represents oversaturated conditions (where demand flow exceeds capacity), and DoS below 1.0 represent undersaturated conditions (where demand flows are below capacity).

#### 2.1.2 Level of Service

LoS is a qualitative measure describing operational conditions within a traffic stream and their perception by drivers and/or passengers. This measure is used in planning design and operation of roads. The road operational conditions in terms of LoS criteria are classified into six categories as shown in Table 2.1.

**Table 2.1 : Level of Service (LoS) criteria**

LoS	Average delay per vehicle (seconds per vehicle)	Traffic signals	Roundabout
A	Less than 15	Good operation	Good operation
B	15 to 28	Good with acceptable delays and spare capacity.	Good with acceptable delays and spare capacity.
C	29 to 42	Satisfactory	Satisfactory
D	43 to 56	Operating near capacity	Operating near capacity
E	57 to 70	At capacity; incidents will cause delays.	At capacity; requires other control mode
F	Over 70	Extra capacity required	Extra capacity required

Source: *Guide to Traffic Generating Developments (Roads and Maritime, version 2.2, 2002)*

The average delay assessed for roundabouts is for the worst movement, and is expressed in seconds per vehicle.

### 3. Modelled scenarios

The intersection of Old Canterbury Road, Weston Street and Edward Street currently operates as a priority controlled intersection with Old Canterbury Road functioning as a major east-west sub-arterial road, and Weston Street and Edward Street as minor local roads.

A tunnel under Old Canterbury Road east of Edward Street is currently being designed as part of the Central Links package. Assessment of at-grade crossing options has been undertaken due to the signalisation of Old Canterbury Road / Weston Street / Edward Street as part of the Summer Hill Flour Mill development north-east of the intersection. Additional treatments are proposed to accommodate the GreenWay. This crossing would be used by cyclists and pedestrians until the tunnel is operational.

Five scenarios have been modelled in *Sidra* as follows:

- **Existing without development:** Priority controlled intersection (current configuration)
- **Existing with development:** Priority controlled intersection with additional traffic generated due the Flour Mill and McGill Street developments
- **Option 1:** Signalised intersection with provision of a bi-directional shared path on the eastern side of Weston Street and an extended no stopping zone on Old Canterbury Road in the westbound direction, east of Weston Street
- **Option 2:** Signalised intersection with closure of Weston Street southbound at its interface with Old Canterbury Road, provision of a right turn lane on Old Canterbury Road in the westbound direction and an extended no stopping zone on Old Canterbury Road in the westbound direction, east of Weston Street
- **Option 3:** Signalised intersection with full closure of Weston Street at its interface with Old Canterbury Road, provision of a right turn lane on Old Canterbury Road in the westbound direction and an extended no stopping zone on Old Canterbury Road in the westbound direction, east of Weston Street

These intersection concepts and modelling results are presented in Chapter 4.

Existing traffic counts are outlined in Appendix A.

## 4. Modelling assessment

### 4.1 Existing intersection performance

Table 4.1 shows the performance of the existing intersection configuration with and without additional traffic generated due to the Flour Mill and McGill Street developments.

Additional traffic has been based on an assessment of the Flour Mill and McGill Street developments undertaken by Arup as outlined in *Summer Hill Flour Mill Preferred Project Report – Traffic and Transport* (Arup 2012).

**Table 4.1 : Existing intersection modelling results**

Time period / approach	Existing without development				Existing with development			
	DoS	Average delay (sec)	LoS	Queue length (m)	DoS	Average delay (sec)	LoS	Queue length (m)
<b>Morning peak hour</b>								
Weston Street south approach	0.12	93	F	<10	0.18	>100	F	<10
Old Canterbury Road east approach	0.38	16	B	25	0.45	18	B	30
Edward Street north approach	0.38	>100	F	10	>1	>100	F	70
Old Canterbury Road west approach	0.31	9	A	<10	0.32	9	A	<10
<b>Overall intersection</b>	<b>0.38</b>	<b>&gt;100</b>	<b>F</b>	<b>25</b>	<b>0.45</b>	<b>&gt;100</b>	<b>F</b>	<b>70</b>
<b>Evening peak hour</b>								
Weston Street south approach	0.10	>100	F	<10	0.16	>100	F	<10
Old Canterbury Road east approach	0.61	13	A	40	0.69	16	B	60
Edward Street north approach	0.52	>100	F	10	>1	>100	F	200
Old Canterbury Road west approach	0.21	17	B	<10	0.23	18	B	<10
<b>Overall intersection</b>	<b>0.61</b>	<b>&gt;100</b>	<b>F</b>	<b>40</b>	<b>&gt;1</b>	<b>&gt;100</b>	<b>F</b>	<b>200</b>

The existing intersection without development traffic currently operates at LoS F during the morning and evening peak hour. This is due to the worst performing movement reported for priority controlled (unsignalised) intersections, which in this case corresponds to the right turns out of Weston Street and Edward Street. Vehicles turning right from either of these roads have to give way to a number of conflicting movements including vehicles travelling on Old Canterbury Road, which is a major east-west road that experiences high traffic volumes.

The addition of development traffic results in the intersection degrading in performance, with average delays greater than 100 seconds. The intersection's deterioration with development traffic is largely attributed to the additional traffic turning into and out of Edward Street. The intersection in its existing configuration would not be able to accommodate the additional traffic generated due to the two developments.

#### 4.2 Option 1 intersection performance

Figure 4.1 shows the Option 1 intersection configuration modelled in Sidra.

Figure 4.1 : Option 1 – Weston Street open with shared path

Table 4.2 shows the performance of the intersection with and without Option 1 upgrades.

**Table 4.2 : Option 1 modelling results**

Time period / approach	Existing with development				Option 1			
	DoS	Average delay (sec)	LoS	Queue length (m)	DoS	Average delay (sec)	LoS	Queue length (m)
<b>Morning peak hour</b>								
Weston Street south approach	0.18	>100	F	<10	0.09	66	E	<10
Old Canterbury Road east approach	0.45	18	B	30	0.91	42	C	205
Edward Street north approach	>1	>100	F	70	0.87	64	E	110
Old Canterbury Road west approach	0.32	9	A	<10	0.89	26	B	275
<b>Overall intersection</b>	<b>0.45</b>	<b>&gt;100</b>	<b>F</b>	<b>70</b>	<b>0.91</b>	<b>37</b>	<b>C</b>	<b>275</b>
<b>Evening peak hour</b>								
Weston Street south approach	0.16	>100	F	<10	0.04	64	E	<10
Old Canterbury Road east approach	0.69	16	B	60	0.97	58	E	475
Edward Street north approach	>1	>100	F	200	0.43	33	C	55
Old Canterbury Road west approach	0.23	18	B	<10	0.95	57	E	250
<b>Overall intersection</b>	<b>&gt;1</b>	<b>&gt;100</b>	<b>F</b>	<b>200</b>	<b>0.97</b>	<b>55</b>	<b>D</b>	<b>475</b>

Signalisation of the intersection with an extended no stopping zone on Old Canterbury Road in the westbound direction and modifying Weston Street with a bi-directional shared path on the eastern side improves the intersection's performance from LoS F to LoS C during the morning peak hour and LoS F to LoS D during the evening peak hour. However, queue lengths on Old Canterbury Road in the eastbound direction during the morning peak hour would extend beyond the Old Canterbury Road / Junction Road intersection. During the evening peak hour, queues on Old Canterbury Road in the westbound direction would extend beyond the Old Canterbury Road / Toothill Street intersection.

Further extension of the no stopping zone on Old Canterbury Road in the westbound direction would not improve queue lengths to an acceptable level and therefore additional modifications would be required.

### 4.3 Option 2 intersection performance

Figure 4.2 shows the Option 2 intersection configuration modelled in Sidra.

Prohibiting vehicles from entering Weston Street at its northern end would require vehicles to turn into Windsor Road to access Weston Street. This would result in a minor redistribution of traffic given the low number of vehicles turning into Weston Street, with the surveys recording 12 vehicles and 22 vehicles turning into Weston Street during the morning and evening peak hour, respectively.

Figure 4.2 : Option 2 - Weston Street partial closure (one-way northbound)

Table 4.3 shows the performance of the intersection with and without Option 2 upgrades.

**Table 4.3 : Option 2 modelling results**

Time period / approach	Existing with development)				Option 2			
	DoS	Average delay (sec)	LoS	Queue length (m)	DoS	Average delay (sec)	LoS	Queue length (m)
<b>Morning peak hour</b>								
Weston Street south approach	0.18	>100	F	<10	0.09	66	E	<10
Old Canterbury Road east approach	0.45	18	B	30	0.58	18	B	130
Edward Street north approach	>1	>100	F	70	0.83	60	E	105
Old Canterbury Road west approach	0.32	9	A	<10	0.86	20	B	240
<b>Overall intersection</b>	<b>0.45</b>	<b>&gt;100</b>	<b>F</b>	<b>70</b>	<b>0.86</b>	<b>25</b>	<b>B</b>	<b>240</b>
<b>Evening peak hour</b>								
Weston Street south approach	0.16	>100	F	<10	0.04	64	E	<10
Old Canterbury Road east approach	0.69	16	B	60	0.82	11	A	260
Edward Street north approach	>1	>100	F	200	0.62	42	C	70
Old Canterbury Road west approach	0.23	18	B	<10	0.66	17	B	125
<b>Overall intersection</b>	<b>&gt;1</b>	<b>&gt;100</b>	<b>F</b>	<b>200</b>	<b>0.82</b>	<b>17</b>	<b>B</b>	<b>260</b>

Signalisation of the intersection with an extended no stopping zone on Old Canterbury Road in the westbound direction and converting Weston Street to one-way northbound improves the performance of the intersection from LoS F to LoS B during both peak hours. However, queue lengths during the evening peak hour on Old Canterbury Road in the westbound direction would extend beyond the adjacent Old Canterbury Road / Toothill Street intersection.

Further extension of the no stopping zone on Old Canterbury Road in the westbound direction would not improve queue lengths to an acceptable level.

### 4.4 Option 3 intersection performance

Figure 4.3 shows the Option 3 intersection configuration modelled in Sidra.

Prohibiting vehicles from entering or exiting Weston Street at its northern end would require vehicles to change their travel route. Existing traffic volumes on Weston Street south of Old Canterbury Road are low, with 12 vehicles travelling southbound and 13 vehicles travelling northbound during the morning peak hour, and 22 vehicles travelling southbound and 7 vehicles travelling northbound during the evening peak hour.

Figure 4.3 : Option 3 – Weston Street full closure

Table 4.4 shows the performance of the intersection with and without Option 3 upgrades.

**Table 4.4 : Option 3 modelling results**

Time period / approach	Existing with development				Option 3			
	DoS	Average delay (sec)	LoS	Queue length (m)	DoS	Average delay (sec)	LoS	Queue length (m)
<b>Morning peak hour</b>								
Weston Street south approach	0.18	>100	F	<10	N/A	N/A	N/A	N/A
Old Canterbury Road east approach	0.45	18	B	30	0.45	11	A	100
Edward Street north approach	>1	>100	F	70	0.76	54	D	100
Old Canterbury Road west approach	0.32	9	A	<10	0.75	9	A	150
<b>Overall intersection</b>	<b>0.45</b>	<b>&gt;100</b>	<b>F</b>	<b>70</b>	<b>0.76</b>	<b>16</b>	<b>B</b>	<b>150</b>
<b>Evening peak hour</b>								
Weston Street south approach	0.16	>100	F	<10	N/A	N/A	N/A	N/A
Old Canterbury Road east approach	0.69	16	B	60	0.67	5	A	155
Edward Street north approach	>1	>100	F	200	0.48	46	D	75
Old Canterbury Road west approach	0.23	18	B	<10	0.57	12	A	100
<b>Overall intersection</b>	<b>&gt;1</b>	<b>&gt;100</b>	<b>F</b>	<b>200</b>	<b>0.67</b>	<b>12</b>	<b>A</b>	<b>155</b>

Signalisation of the intersection with an extended no stopping zone on Old Canterbury Road in the westbound direction and closing off Weston Street to traffic at its interface with Old Canterbury Road improves the performance of the intersection from LoS F to LoS B during the morning peak hour and LoS F to LoS A during the evening peak hour. Queue lengths are acceptable during both peak hours.

Removing parking during the morning peak period marginally improves the performance of the intersection, and therefore prohibiting parking would only be necessary during the evening peak period.

**4.5 Induced traffic on Weston St resulting from signalisation of the intersection**

Annual Average Daily Traffic (AADT) in 2014 on Windsor Road was observed to be 540 vehicles northbound and 640 vehicles southbound. The signalisation of Old Canterbury Road / Weston Street / Edwards Street may induce traffic from Windsor Road onto Weston Street. Based on the assumption that Weston Street northbound traffic volumes are similar to Windsor Road northbound volumes, this would equate to a maximum of 50 vehicles travelling onto Weston Street from Windsor Road during the morning and evening peak hour. Therefore, induced traffic on Weston St due to the signalisation of Old Canterbury Road / Weston Street / Edward Street would be up to additional vehicle every minute during the morning and evening peak hour.

Given the low volume of traffic using Weston Street, a maximum of 50 vehicles per hour would be induced onto Weston Street. This level of induced traffic is within the environmental capacity performance standard for a local street (200 vehicles per hour<sup>1</sup>). Hence the impact to Weston Street would be minor. In addition, signalisation of Old Canterbury Road / Weston Street / Edwards Street may lead to vehicles turning left onto Old Canterbury Road via Windsor Road instead of Weston Street.

**4.6 Service road at the corner of Old Canterbury Road and Weston Street**

Users of the GreenWay would need to cross the existing Weston St service road located immediately south-east of the Old Canterbury Road / Weston Street / Edward Street intersection. The design to signalise Old Canterbury Road / Weston Street / Edward Street should consider the intended form and function of the service road while the GreenWay is operational. Traffic volumes and the speed of vehicles using this service road are likely to be very low as it provides vehicular access to a limited number on street parking spaces.

Future access to the service road by vehicles would be constrained by intersection geometry and location of poles and traffic signal equipment. Further this could potentially create unsafe conflicts between vehicles and pedestrians. Treatments that have been considered include:

- Closing vehicle access to and from the service road (Option 1 and Option 2)
- A continuous footpath treatment that would allow vehicle access to a shared zone along the service road (Option 3)

Implementing a shared zone may create conflicts with pedestrian waiting areas, however the number of vehicles that would access the service road would be very low and therefore is an appropriate treatment. Closing the service road to vehicular traffic is considered the safest option for operation of the new traffic signals.

---

<sup>1</sup> Guide to Traffic Generating Developments (RTA, 2002)

## 5. Options summary

Table 5.1 provides a summary of modelling assessment.

**Table 5.1 : Old Canterbury Road / Weston Street / Edward Street modelling summary**

Option	Morning peak hour		Evening peak hour		Comments
	Level of Service	Queue length (metres)	Level of Service	Queue length (metres)	
Option 1 (Weston Street open)	C	275	D	475	Acceptable operational performance, however unacceptably long queue lengths during the morning and evening peak periods. Requires additional modification to reduce queue lengths.
Option 2 (Weston Street partial closure)	B	240	B	260	Acceptable operational performance however long queue lengths during the evening peak period. Requires additional modification to reduce queue lengths.
Option 3 (Weston Street full closure)	B	150	A	155	Acceptable operational performance and queue lengths

Option 3 would the most efficient intersection operation with the shortest queues and least delay to vehicles.
